

## Enquiries and estimating management.

**StruM.I.S Estimating** is an enquiry and estimating tool designed specifically to meet the needs of Estimators in the steelwork fabrication industry. It enables users to process and manage information throughout the tendering process using a number of pricing methodologies. Part of the complete StruM.I.S .NET fabrication information management system, StruM.I.S Estimating is a major component of this total modular solution.

StruM.I.S Estimating is for Estimators, QS and Commercial Managers involved in the detailing of accurate tenders for steelwork fabrication.

### Features

- Tenders/Enquiries Management
- Wizard Import of information from any electronic source i.e. 3D CAD systems, Excel
- Rapid material input/take-off via inbuilt library
- Quotation generation and reporting
- Embedded autocut material optimiser for accurate calculation of waste
- Worldwide Hot and Cold Rolled Section Catalogue incorporating material lengths and costs
- Includes ability to build costs for individual Processes/Labour usage, including per section or assembly type
- User definable templates for different types of fabrication i.e. stairs, portal frames
- Parametric labour and connection costing
- Quick and easy tools for rapid/on the fly data entry and creation
- Allows for loading of standard estimate inclusions, e.g. treatments, transport
- View 3D StruWalker model files and CAM drawings
- Batch updating of Estimate costs and rates i.e. fluctuating material prices

### Benefits

- Retention of acquired knowledge within processes, whilst permitting detailed performance analysis
- Automation of repetitive tasks and greater integration, leading to cost/time/error reduction
- Facilitation of quotation standardisation
- Easy management and tracking of customer information, enables better recording of information and saves time
- Waste minimisation and materials maximisation
- Reduction of set-up time, immediate return and benefits
- Provides estimators with the ability to prepare very accurate bespoke tenders
- Take-offs with no extra data entry time
- Automatically add labour for main bar, connection details and connection labour times at a specified hourly rate
- Facilitation of Planning, and early issue flagging for rapid resolution
- Apply fluctuating supplier costs automatically to your Estimates
